Media Release: ACUTrust(TM) Web Services Anti-fraud Identification Service Helps Customers Identify The Service Provider's Website and Helps Protect The Service Provider's Brand

Greater Atlanta, GA March 21, 2006 -- Internet Security Blanket Corporation announces its Web Services implementation of its Fraud Deterrent product, ACUTrust(TM) (patent pending) Web Services Anti-fraud Service (<http://www.isblanket.com/products/acustrust/>). ACUTrust(TM) deters online fraud, phishing, customer loss, and Website brand counterfeiting. ACUTrust(TM) provides customers, using secure services (Banking, Ecommerce, Legal, Accounting, Medical, CRM, etc.), with positive identification of a service provider's Website.

The root of the problem is the traditional one-way username/password authentication method. By entering the correct username/password, the Website verifies the user's identity but the identity of the Website is still unknown to the user. Many online scams use fraudulent Websites that are made to look authentic. When unsuspecting users login to the fraudulent Websites, the scam artists immediately capture the user's username and password. The login information is then used to gain access to legitimate online accounts.

ACUTrust(TM) Technology leverages an encrypted token-based system to allow the authenticity of an electronic communication to be verified. Email, Web Services, Websites, Instant Messaging, etc. are just a few of the electronic communications that will benefit from ACUTrust(TM). A per user or per token pricing structure means that it is cost effective for any size business (volume purchases are available).
